Laboratory 3

1. Aggregation: Convert the following class diagram into java code. Test the Employee and Address class in AggregationTest.java (This class has main method).

```
                    Employee
-empId: int
-empFirstName: String
-empLastName: String
-salary: double
                                                          Address
+Employee(): void                             -Id: int
+Employee(empId:int,empFirstName:String,      -Line1: String
         empLastName:String,salary:double): void    -city
+setId(empId:int): void                       -country
+setFirstName(empFirstName:String): void      +setId(Id:int): void
+setLastName(empLastName:String): void
+setSalary(salary:double): void
+getempId(): int
+getempFirstName(): String
+getempLastName(): String
+getSalary(): double
+toString(): void
```
